First, describe

- **Your starting level on this subject**
- **Your aims and objectives**
- **Are there any known obstacles in your way**?

My starting level for this subject is 0. I have no prior knowledge nor experience in software development.

My goal would be to have basic knowledge of html, JavaScript and all the subjects that we're going to be learning during this course.

So far I've had a bit of a problem with scheduling and doing my work on time. Some things have been harder than others but I'm hoping to improve on it.

Then, answer the following questions:

1. When should you submit the three parts of your learning diary?

- The first part before the first class of the second week. The second part before the second period. The third part before the last week of the course.

2. What are the minimum requirements for passing the course?

- Passing the exam, having 50% of the mandatory course work done and submitting all parts of the learning diary.

3. What will happen if the teacher has to ask you to submit a missing learning diary or remind you repeatedly about low course activity, missing coursework submissions etc?

- You will get a lower grade.

4. How often should you submit coursework?

- By the required deadlines.

5. Is it possible to get coursework bonus in grading?

- Yes, if you've submitted more than 75% of the course work before the final exam.
